PROFESSIONAL SUMMARY

Software Engineer with experience in Full Stack Development, Backend Engineering, QA validation, API integration, SQL, and web application development. Skilled in building scalable applications using Python, Flask, React, JavaScript, and PostgreSQL while applying software engineering principles, testing methodologies, and clean architecture. Strong foundation in Data Structures, Object-Oriented Programming, REST APIs, databases, debugging, and software quality practices.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL, HTML5, CSS3

Frameworks: Flask, FastAPI, React, React Native (Basics), Tailwind CSS

Databases: PostgreSQL, SQLite

Tools: Git, GitHub, VS Code, Postman, Jira, Jenkins, PyCharm

Concepts: REST APIs, OOP, Data Structures, Algorithms, RBAC, Authentication, Software Testing, QA, Agile, Responsive Design

EXPERIENCE

Software Developer Intern

PrimeSophic Technologies

- Built responsive web applications using React, Flask, and PostgreSQL.
- Designed REST APIs, optimized SQL queries, and integrated frontend with backend services.
- Improved application usability through reusable components and responsive UI implementation.
- Collaborated using Git-based development workflows and Agile practices.

Web Development Intern

Oct 2025 – Nov 2025 Oasis Infobyte

- Developed responsive web interfaces using HTML, CSS, and JavaScript.
- Improved maintainability through modular code structure and frontend optimization.
- Automated repetitive testing tasks using Python scripts.

SELECTED PROJECTS

AgroChain – Hybrid Web2/Web3 Agricultural Supply Chain Platform

[Live Demo](#)

- Engineered a hybrid blockchain-relational architecture.
- Architected a hybrid Web2/Web3 platform using React, Flask, Solidity, Hardhat, Ethers.js, and PostgreSQL/SQLite for blockchain-enabled agricultural traceability.
- Developed secure REST APIs with JWT authentication, RBAC, dual OTP verification, and MetaMask signature-based wallet authentication.
- Designed and deployed Solidity smart contracts for crop traceability, decentralized ratings, and peer-to-peer microfinance using OpenZeppelin.
- Implemented QR-based crop verification, geographic verifier allocation, PDF certificate generation, and dashboards supporting six stakeholder roles.

Meri Panchayat – Public Issue Reporting Portal

[Live Demo](#)

- Developed a full-stack public grievance management platform using Python, Flask, SQLite, HTML, CSS, and JavaScript for citizen issue reporting and administration.
- Implemented secure authentication with Email OTP verification, password hashing, session management, and Role-Based Access Control (RBAC).
- Designed complaint lifecycle workflows including issue reporting, image uploads, tracking IDs, status management, multilingual support, and administrator dashboards.
- Built relational database models, CRUD operations, analytics dashboards, and notice management modules to streamline grievance resolution and improve workflow efficiency.

A² Kitchen – Smart Recipe Generator

[Live Demo](#)

- Developed a responsive recipe recommendation platform using JavaScript (ES6+), HTML5, CSS3, and the Spoonacular API to generate recipes based on user-selected ingredients.
- Engineered an offline-first architecture with a fallback database of 60+ recipes, API error handling, and automatic failover for uninterrupted user experience.
- Implemented community recipe contributions, localStorage-based data persistence, hidden administrator controls, and CSV/JSON data export functionality.

ResumeCraft – Privacy-First ATS Resume Builder

[Live Demo](#)

- Developed a privacy-first resume builder with live preview, offline PDF parsing using Mozilla PDF.js, and ATS-compliant Harvard formatting for instant PDF export.
- Implemented optional AI-powered resume enhancement using OpenAI, drag-and-drop section reordering, dynamic templates, and localStorage-based persistence.

Role of Artificial Intelligence in Enhancing Academic Success

[View](#)

- Led a quantitative study of 250+ students and analyzed AI adoption trends using Python to evaluate its impact on academic performance and student well-being.

News Website Scraper

[Live Demo](#)

- Developed a Python web scraping application using Requests, BeautifulSoup, and Pandas with sentiment analysis and CSV/Excel data export.

Food Delivery Time Prediction

- Built a machine learning model in Python using regression algorithms, feature engineering, and model evaluation to predict food delivery times.

WhatsApp Chat Analytics

[Live Demo](#)

- Developed a Web analytics application that visualizes messaging trends, user activity, emoji usage, and conversation statistics through an interactive dashboard.

EDUCATION

Master of Computer Applications (MCA)

St. Agnes College (Autonomous)

CGPA: 7.93

Bachelor of Computer Applications (BCA)

Dr. P.D.P. P.S.P Government First Grade College

CGPA: 7.87

CERTIFICATIONS

AWS Solutions Architecture Job Simulation • Electronic Arts Software Engineering Job Simulation Data Structures & Algorithms Training • Internet of Things Workshop • Advanced Microsoft Excel
